What should a construction agent decide?

As construction gains intelligent assistance, the people responsible stay in charge of the decisions that matter.

Keeping people in charge

Intelligent assistance is arriving in construction: tools that find information, suggest a sequence of work and help coordinate machines and teams. The opportunity is real — faster planning, fewer gaps and less waiting. So is the question behind it. When software can recommend what happens next on site, the industry has to be clear that engineers, planners and supervisors remain in charge of what matters: safety, quality and the commitments made to a client.

Faster work, under human direction

TEICON is Anton Solutions' agentic construction initiative, in development. Its aim: coordinated machines building roads faster and more safely, under human direction. Teams plan and coordinate work in less time, every machine action stays under human direction, and every important decision stays with the person responsible for it.
