

THE PURPOSE OF A PROBLEM IS SOLUTION

Purpose gives meaning to everyone. Even technology, however advanced and perfected, has no purpose for most of the world unless connected to a commoner. I dreamt of ways to make technology relevant in daily life, to bring affordability to the masses, sustainability to the planet, and reliability to our needs. That dream made me build Anton Solutions. I am a nomad seeking to find a purpose for every technology out there, connecting it to someone's life who needs it. That is my journey; **what is yours?**

Anton Solutions designs and develops products and systems to create a more sustainable, affordable and friendly world. Spanning a wide range of technological landscapes, from construction to healthcare to retail, our technological outputs serve everybody.

At Anton Solutions, we aim to develop the lightest solution for every complicated challenge. Today, Anton Solutions is an in-house library featuring various products and solutions. It also continuously develops, invests in, and incubates new technologies that form the core intellectual framework for various related group entities worldwide.

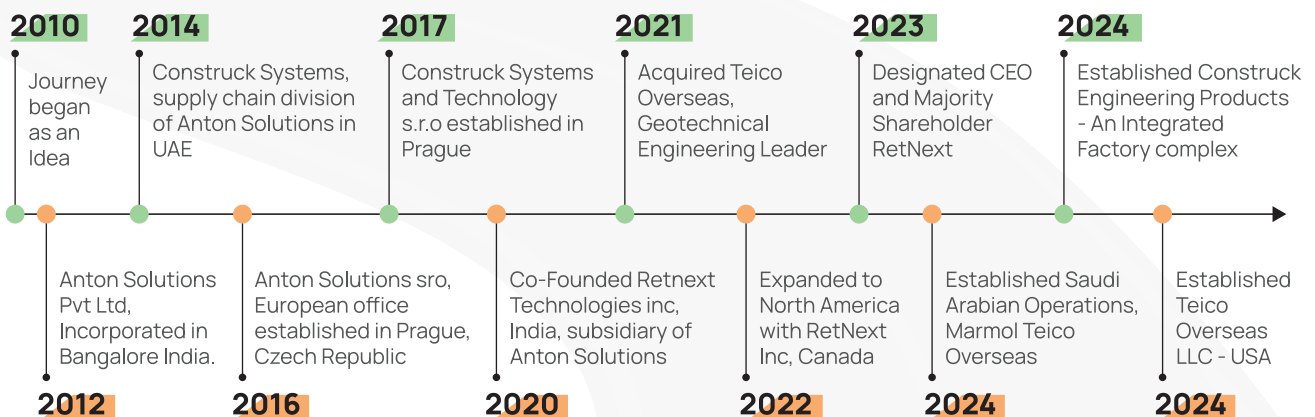

The Journey

In 2010, A dream became a revelation to a young man whose entrepreneurial instinct slowly morphed into an idea. Through the next two years, this idea was being developed into a viable business model even without any investment. The official journey began in 2012 with its first registered office, a solution finder, Anton Solutions was born. Restricting to private clients during its infancy, Anton Solutions started finding opportunities in the construction materials business by providing value engineered products to save client costs. By 2015, overseas offices were established in the Middle East and Europe, with the offerings expanded

to consulting, construction, engineering and supply chain. After spinning off successful subsidiaries into separate companies like Construck, RetNext and Teico Overseas, Anton Solutions entered critical fields like Energy, Health Care and Mobility.

Today, Anton Solutions is an umbrella covering various companies, each focused on its core strength and technology delivery, but all are connected under one vision of its founder.

Engineering & Consulting

Engineering your dreams into the real world

We are a boutique consulting company providing design services for civil engineering projects, industrial digital applications, environmental services, and energy and utilities development. As the original division that formed Anton Solutions, our engineering and consulting division started by finding cost-saving alternative construction products to the existing traditional ones. As our expertise progressed, we identified potential for a design consultant who can approach a challenge not only to find a design solution but also a solution that serves the interest of clients, construction partners, manufacturers, distributors and the logistics team involved in delivery. It's a unique approach where an engineering consultant isn't confined to the ideas inside the drawing room but also on the factory floor with the site and delivery teams.

Our consultancy services broadly cover the fields below with several sub-divisions based on focus and specialization.

Geotechnical Engineering

Slope Stability Analysis

Soil Stabilization and Ground Improvement Designs

Hydrology Study and Drainage Designs

Containment and Lining Designs

Coastal Erosion and Marine Engineering

Environment and Sustainability Engineering

Digital Solutions for Industrial Applications

Energy Production

Infrastructure

Building a future-ready infrastructure.

Civil infrastructure is the mainstay of every development program in any country. Our Engineering Procurement and Contracting (EPC) division, known as Teico Overseas and Marmol Integrated, has successfully completed over 100+ projects over the last decade. These projects cover a wide range of challenging terrains, from soft desert dune conditions to mountainous high-altitude roads and utility and energy projects. We are the market leader in the Middle East in Geotechnical engineering as the only company to have completed over \$250 million in projects on Geotechnical Engineering alone. These projects open the gateway for road connectivity between population centres and thus proud partners in progress serving the governments, energy companies and other clients.

Through its manufacturing arm, Anton Solutions, Construck Systems and Technology is also a manufacturer of various infrastructure products designed and developed in-house by Anton Solutions. These proprietary designed Slope Stabilization, Road Safety, and Soil Improvement products are manufactured in various Construck and its Partner factories worldwide.

Utilities & Energy

Energize your ecosystem without harming ourselves.

Humanity survives on the basic need of water and energy. That's why we realized that any approach to providing water and energy security to the world should be built based on harnessing as many natural forces. This provides a looped sustainability where the production of one doesn't deplete the other but only complements the other. Anton Solutions aims to enrich the world with perpetual energy sources, regenerate water, and clean up our contaminated regions.

Anton Solutions' presence in the field of utilities and energy is through diverse solutions, including but not limited to the design and manufacturing of renewable energy products (wave turbines, hydrokinetic turbines, etc.), energy production facilities, water generation and regeneration facilities, green hydrogen production and transportation, energy storage, digital platforms for energy management and contamination cleanup technologies.

Healthcare

Bringing affordability and convenience to the healthcare system.

Healthcare is undergoing enormous daily changes in how treatment is delivered to patients and in preventive methodologies. With the latest advancements and technologies, almost everyone who can afford treatments enjoys these innovations' benefits. Recently, Pandemics have played a role in creating bigger healthcare challenges for people, bringing the need for technological advancements to provide equal treatment opportunities even more severe.

It is we who help you to reach your doctor without reaching your doctor. We make you feel confident about stepping out into the public without fearing another pandemic. It is we who help you to keep your social gatherings and meetings safe. We bring millions of people to access healthcare, even in the most remote parts of the world, with confi-

dence and comfort. We keep your loved ones safe so we can all grow old together.

Anton Solutions hosts a variety of technologies, from Pandemic monitoring to Decentralized healthcare systems to Digitized Personal Health Records. We aim to provide early warnings and help relevant entities monitor population centres' health information without affecting anyone's daily life. We strive to bring healthcare services to most of those who can't afford them or need to receive the necessary medical attention in an adequate amount of time. Our solutions and products provide considerable ease and accessibility to the masses when experiencing treatment and preventive methods, thanks to a very silent process that covers the beneficiaries.

Anton Solutions Healthcare systems will revolutionize how people experience healthcare daily.

Mobility

Reach anywhere you want to, only safer and more conveniently.

Transportation is the main economic and social system activity for people or businesses. We have come a long way from traditional transportation methods in the last century with a highly evolved transportation system around our daily lives. These solutions directly contribute to the world economy. This hasn't come without challenges like pollution, affordability, running costs, and more.

Anton Mobility is the next step and continuation of the combined evolution of Anton Infrastructure and Consulting divisions. Deriving its core ideas from these divisions, Anton Mobility creates an ecosystem of transportation technologies that makes commuting safer, greener, affordable and convenient for the common people.

Mobility products from Anton Solutions aim to find the best technologies from around the world combined to provide an affordable and practical way of transportation that can move people from point A to B without the hassles of waiting time, last-mile connectivity and pollution. With technologies ranging from battery technology to UAVs to smart traffic services, we combine sensible technologies, allowing seamless transportation options and developing the infrastructure solutions for tomorrow.

Logistics and SupplyChain

Experience the seamless world of commerce.

Cargo movement is the basis of commerce in the world. It connects the business to people and people to their comforts. Hence, any technology or methodology that can improve its connectivity and efficiency directly affects the daily lives of people worldwide.

Anton Solutions is in the retail and wholesale supply chain, offering products like RetNext, autonomous delivery, virtual reality shopping, and warehouse management.

On the merchant side, RetNext automates manufacturing, procurement, purchasing, warehousing, and retail sales through a single platform, enabling the commerce of millions of merchants without any loss of time or decision paralysis. This

translates to lesser inventory and reduced wastage of unsold products, indirectly contributing to lower emissions and savings.

On the retail consumer side, we provide the whole shopping experience from the favorite store without leaving the house. This is combined with autonomous delivery built directly on the RetNext platform, allowing seamless delivery from the source to consumers. The complicated process underneath is totally masked by a seamlessly integrated shopping experience that adds value to everyone, from the manufacturer to the consumer, through savings and ease of life.

Environment

Say, thank you to our earth by protecting it from us.

Environmental Protection Solutions, involving designing solutions and systems to protect the environment, has been an interesting journey for Anton Solutions. We make our world greener and more sustainable through products and services designed to maintain our planet in its original natural environment.

The unique facet of Anton Solutions is that our products and services across all divisions contribute to a greener and more sustainable activity. Some examples involve our value-engineered infrastructure solutions that contribute to lower emissions and carbon footprint. Our renewable energy solutions take it a step further. To complement our overall operations, we actively pursued excellence in activities that contribute directly to

this industry with environment protection specific products.

Our expertise started with lining and contaminating landfills and other hazardous waste management ecosystems. We provide turnkey solutions to prevent our earth's contamination from industrial and municipal wastes. Additionally, we work on digitizing and technology-enabled waste management infrastructure that moves closer to people's daily lives. From tackling oil spills to clearing plastic debris in our ordinary surroundings, we constantly try to evolve and find newer solutions to clean up our planet.

Urban Living

Living Spaces with a Personality.

Shelter is one of the basic needs of humans, but one of the biggest challenges humanity faces is inadequate housing. Although our land mass can support every human on earth today, we find it challenging and often struggle to find enough accommodation for everyone.

Anton Solutions aims to answer this challenge and provide a safe, affordable, technology-enabled smart living spaces that can be self-sufficient and self-regulating. In other words, your homes will be loaded with smart elements, bringing a personality to where you live.

Housing solutions from Anton Solutions take on the most crucial question of affordability and accessibility. We believe that unless 75% of the people cannot afford smart houses, the technology of smart houses hasn't found its purpose yet. Hence, we are bringing smart ideas to reduce costs with smart construction methods, efficient materials, digitized energy identity flexibility, and other components that make a living anywhere reflect our dreams and aspirations.

Technologies for Seamless living

We make life more manageable with the touch of a button and sometimes even without it.

Step into the world of convenience and redefined social experience. Anton Solutions is constantly reinventing and reimagining the way we build the world around us. From simple interactions like shopping, daily commute, government services, banking, and more, we aim to reduce your wait time, protect your privacy, and increase your security without inconveniencing you with formalities.

Anton Solutions, with its host of technology built around our daily lives, is both visible and invisible to you. Our technology starts with identification projects, health records, drone delivery, and virtual reality-enabled activities for working, shopping, educational experiences, and more
